Continuation of 5. does NOT place the application in condition for allowance because: Applicant's amendment field on the 22nd of August, 2003 will be entered, the Examiner agrees that no new matter were added. However the Examiner disagrees with the Applicant arguments listed in the above-mentioned amendment.

Applicant argues that Najork reference does not teach, "setting an access time for a second file based on time data from a first file". However the Applicant agrees on (Page 13, last paragraph) of the August 22, 2003 amendment, that Najork discloses setting an access time based on the download time of a previous document. The Examiner would like to bring the Applicant's attention to the fact that Najork's "download time" is actually time data (time is stored in the computer as data), and since this data is associated with the documen previously downloaded (a "document" in the Najork reference is being interpreted to be the same as a "file" in the instant Application), then Najork is teaching this.

Applicant argues that Shaffer reference does not teach the feature of "based on time data from the first file". The Examiner however disagree with that, according to the Summary of the instant application (page No. 4).

The Examiner is interpreting this scheduling of an update (like when the user set a push service (i.e. web site) to regularly update his/her favorite stock (Shaffer, Col 1, Lines 18-25), this is similar to what was mentioned by the Applicant in the Summary section of the instant Application (Page No. 4). The Examiner is interpreting the "based on said time data" somewhat similar to Shaffer's system but from the other end of it, the system is receiving the user's settings (the scheduling) of when the next time to download and updated the user with a new version of the stock price.

The Examiner admits that no prior art was found for a search engine that crawls the internet to download web sites and at the same time download the time (data) stored in a special location (folder) in the computer that is hosting this web site, and that this time element or indicator (data) is regarding the next time this web site will be update. The Examiner is not suggesting to the Applicant to limit and narrow the independent claims, but at the same time, the current claims are just to broad and can read on many known features of most search engines.
